Thanks from the Wyoming Lions Club to the volunteers who helped finishing taking down Christmas lights on the 8th. We were done in less than an hour and a half. Also, thanks to Nutrien for use of the forklifts and Franzens for storage space.

Needing some good news? It has been 16 years (as of 1-10-23) since Lisa Eganhouse received her liver transplant.

To avoid frozen water lines – An indicator of an impending water service line freeze up is to check the temperature of your water after running it until it is cold. (Allow your water to run until it is cold and then check the temperature.) The water temperature should be around 45 degrees. If the temperature drops to 38 degrees or below, you may have an impending freeze up and the frost may be getting close to your service line. If your water is rusty in color, this is an indication that your water line is starting to freeze up and you should run water on a continuous basis at the size of pencil lead stream.

Never be afraid to try something new. Remember, amateurs built the Ark and professionals built the Titanic.
