To avoid frozen water lines – An indicator of an impending water service line freeze up is to check the temperature of your water after running it until it is cold. (Allow your water to run until it is cold and then check the temperature.) The water temperature should be around 45 degrees. If the temperature drops to 38 degrees or below, you may have an impending freeze up and the frost may be getting close to your service line. If your water is rusty in color, this is an indication that your water line is starting to freeze up and you should run water on a continuous basis at the size of pencil lead stream.

Senior Dining is held on the 1st and 3rd Wednesdays of the month at the Memorial Hall.
